## Product liability and warranty

### Turn-Only and Tilt & Turn Hardware for windows and balcony doors

According to the defined manufacturer's liability described in paragraph 4 of the "product liability law", the following information regarding Turn-Only and Tilt & Turn Hardware for window and balcony door sashes should be observed. Non-compliance exempts the manufacturer of his liability.

#### 1. Product information and specified application.

Turn-Only and Tilt & Turn Hardware as covered by this definition is one-hand-operation Turn-Only and Tilt & Turn Hardware for windows and balcony doors in building construction. This is used to enable windows and balcony-door sashes into a turning position by operating a 'hand lever' (handle) or into a limited tilting position in the case of the scissors (sash-stay) version.

Turn-Only and Tilt & Turn Hardware is used on vertically installed windows and balcony-doors made of timber, PVC, aluminium or steel and their corresponding material combinations. Conventional Turn-Only and Tilt & Turn Hardware as covered by this definition, lock window and balcony-door sashes and enable various ventilating positions. When closing, the gasket counter force must be overcome as a rule.

Differing applications do not correspond to its specified application. Burglar-resistant window and balcony doors, window and balcony doors for damp rooms and those for use in environments with aggressive, corrosive air content, require hardware adapted for the respective application and individually agreed upon performance features.

Opened windows and balcony-door sashes achieve only a shielding function and do not meet any demands on joint impermeability, water tightness, sound reduction, heat insulation and burglary resistance.

In the case of wind and draught, the window and balcony-door sashes must be closed and locked. Wind and draught as covered by this definition is present, if a window or balcony door sash while in one of its opening positions, can open or close on its own, in an uncontrolled manner by means of either air pressure or air suction. A static opening position of windows and balcony door sashes can only be achieved with additional hardware. The resistance against wind loads in a closed and locked state is dependent on the respective designs of windows & balcony doors. Should wind loading in accordance with DIN EN 12210 occur (in particular pressure test p3), suitable hardware compilations are to be matched in relation to the respective window design and frame material, and each case individually agreed upon.

Generally speaking, Turn-Only and Tilt & Turn Hardware can fulfil the demands made for barrier-free dwellings according to DIN 18025. However corresponding hardware compilations and installations for windows and balcony doors are necessary, which must be coordinated and each case individually agreed upon.

#### 2. Misuse

Misuse - therefore not the specified product utilisation - of Tilt & Turn hardware for windows and balcony doors occurs in particular:

- if obstacles are inserted in the opening vicinity between frame and sash, thus preventing its proper specified use.
- when window and balcony door sashes are pressed advertently or uncontrolled (for example by the wind) up against the window reveals, so that the hardware, the frame material or other individual window or balcony-door sash components are damaged or destroyed and/or if consequential damage can arise.
- if additional loads are put on windows or balcony-door sashes (for example if children swing on the window or balcony door sash),
- if while closing the windows and balcony door sashes, someone reaches into the rebate between the sash and frame (injury hazard).

#### 3. Liability

The respective entire hardware set may only consist of hardware components from Roto's outward opening range. In the case of inappropriately assembled hardware, and/or in case of non original accessory components and/or non factory-approved accessory components, no liability is accepted.

#### 4. Product performance

##### 4.1 Maximum sash weights

The following listed maximum sash weights for the individual hardware versions may not be exceeded. The building component with the least permissible load-carrying capacity determines the max. sash weight. Application diagrams and component allocation are to be observed.

##### 4.2 Sash sizes

The presentation of the application diagrams shows the relationships between the permissible sash rebate widths and sash rebate heights, depending on various glass weights and/or thickness'. The resulting sash rebate dimensions or sash formats (portrait and/or landscape format) - as well as the maximum sash weight - must not be exceeded under any circumstances.

##### 4.3 Hardware-combination

The manufacturer's regulations that deal with the combination of hardware are obligatory. (for example: the application of additional stay arms, the hardware design for burglar-resistant window and balcony-door sashes).

#### 5. Product maintenance

Security relevant hardware components are to be examined at least once a year for stability and wear and tear. Depending on the requirements, the fixing-screws are to be tightened and/or parts exchanged. In addition to this, the following maintenance work is to be carried out annually:

- All movable parts and all locking points of the Turn-Only and Tilt & Turn Hardware are to be greased and tested.
- Only cleaning and maintenance agents which do not damage the corrosion protection of the hardware components are to be used.

The hardware adjustments - particularly in the vicinity of the corner pivot rest and the scissors - as well as replacing parts and the unhinging & hinging of the active sash are to be carried out by a specialist company.

When surface treating - for example when painting or varnishing - the windows' and balcony doors hardware is excluded from this process and is also to be protected against any impurities (paint/varnish splashes).

##### 5.1 Retention of the surface quality

Electrolytically applied zinc coatings are not attacked in a normal room climate, when no condensation can form on the hardware or occasionally formed condensation can dry rapidly.

In order to permanently preserve the hardware's surface quality and to avoid deterioration by corrosion, it is imperative to observe the following points:

- The hardware and/or the rebate areas are to be ventilated sufficiently in particular during the building phase so that they are not exposed either to direct wetness or condensation.
- The hardware is to be kept free from deposits and soiling from building materials (building dust, plaster, cement etc.).
- Aggressive vapours in the rebate area (for example: through formic acid or acetic acid, ammonia, amine or ammonia compounds, aldehydes, phenols, tannic acid etc.) in connection with small formations of condensation can lead to fast corrosion of the hardware. In the case of such aggressive vapours occurring, a general adequate ventilation of the rebate areas of windows and balcony doors is to be ensured. This is particularly valid for windows and balcony doors made of oak or other types of timber with a high concentration of (tannic-) acid.
- Furthermore no acetic-acid or cross-linked acidic sealing compounds or those with the above mentioned contents may be used, since both the direct contact with the sealing compound and its vapourisation can attack the surface.
- The hardware may only be cleaned with mild, pH-neutral cleaning agent in diluted form. Under no circumstances may aggressive, acidiferous cleaners or abrasive cleaning agents whose contents are listed in the above paragraph be used.

#### 6. Obligation to issue information and instructions

To fulfil the information and instruction obligations as well as the maintenance operations according to the "product liability law", the following is available:

- for planning engineers "planning documents" for authorised dealers "catalogues"
- for fabricators "installation instructions" and "factory drawings"
- for builders and end users: "service Et maintenance instructions" as well as "Operating manuals".

In order to safeguard the function of Turn-Only and Tilt & Turn Hardware for windows and balcony doors:

- Planning engineers are obliged to request and comply with the manufacturers or authorised dealers product information.
- The authorised dealers are obliged to observe and request product information from the manufacturer and to pass this on to the fabricators, in particular installation instructions, factory drawings, service Et maintenance instructions as well as operating manuals.
- Fabricators are obliged to observe the product information and in particular to request service & maintenance instructions as well as operating manuals from the manufacturer or authorised dealer, and to pass these on to the builders and end users.

#### 7. Applicability for related hardware

The variations possible within the individual hardware system - for example Tilt-only and Top-hung hardware - are to be treated according to the corresponding valid features of product performance, product maintenance, information and instruction obligations, product information, specified use/application and misuse.

The general design description lists characteristics of the Roto NT, K hinge, tilt and turn window hardware:

- Designed for use on all timber, PVC-U and aluminium windows with a standard eurogroove.
- Faceplate width 16mm.
- All cams are adjustable by +/-0.8mm, meaning adjustments can be made on site.
- 3 locking cam versions. NT components listed here feature 3 different locking cam options that differ in application and adjusting capabilities. Detailed adjusting information can be found on page 25.

**Locking cam E**  
Compression adjustable

**Locking cam P**  
Compression adjustable security cam

**Locking cam V**  
Height and compression adjustable security cam

- Precision design ensures smooth performance in all applications.

### Coating specification

**RotoSil** surface protection procedure has been developed by Roto for the hardware product range, based upon galvanising, chromating and an additional sealing. **RotoSil** enables the hardware components to appear in a smooth silver tone. The quality requirements of RAL-RG 607/3 are exceeded, also the protection effect against acids has been decisively improved. The surface protection regulations of the RAL quality assurance association in Velbert, Germany, are more than fulfilled.

Surface protection with **RotoSil** exceed the requirements of the following standards:

**RAL 607/3** (72 hours protection from white rust and 240 hours protection against red rust. Inclusive of cycle testing to 60,000 cycles).

**BS 6375** pt. 2 "Performance of Windows."

**BS EN 1670:2007 part 5.6, grade 5**  
(480 hours building hardware corrosion resistance).

## 'K' hinge

### Installation and adjustment information

#### Suggested installation sequence

Standard tilt-range (140mm)

Reduced tilt-range (80mm)

The slider's final position (anti-slam device) is reached automatically by means of tilting the sash.

### Hinging the sash

It is only possible to insert the sash stay bearing pin in the closed position.

#### Sash stay bearing pin Installation – Closed position

1. Slide in the sash stay bearing pin manually.
2. Push in the sash stay bearing pin with the pin extractor handle (for sash stay bearing pin).

**Pin extractor handle**  
Material number  
**311 029**

### Unhinging the sash

It is only possible to remove the sash stay bearing pin in the closed position.

#### Sash stay bearing pin Pull out in this position with the pin extractor handle.

**Replacement-blade**  
Material number  
**230 765**

### Frame clearances (including cover caps)

Sash weight 100kg

### Retro adjustment (only if necessary)

# Roto NT

## 'A' hinge

## 'A' hinge

### Installation and adjustment information

#### Suggested installation sequence

Standard tilt-range (140mm)

Reduced tilt-range (80mm)

The slider's final position (anti-slam device) is reached automatically by means of tilting the sash.

### Hinging the sash

It's only possible to **insert** the sash stay bearing pin in the closed position.

### Unhinging the sash

It's only possible to **remove** the sash stay bearing pin in the closed position.

### Frame clearances (incl. cover cap)

Sash weight 100kg

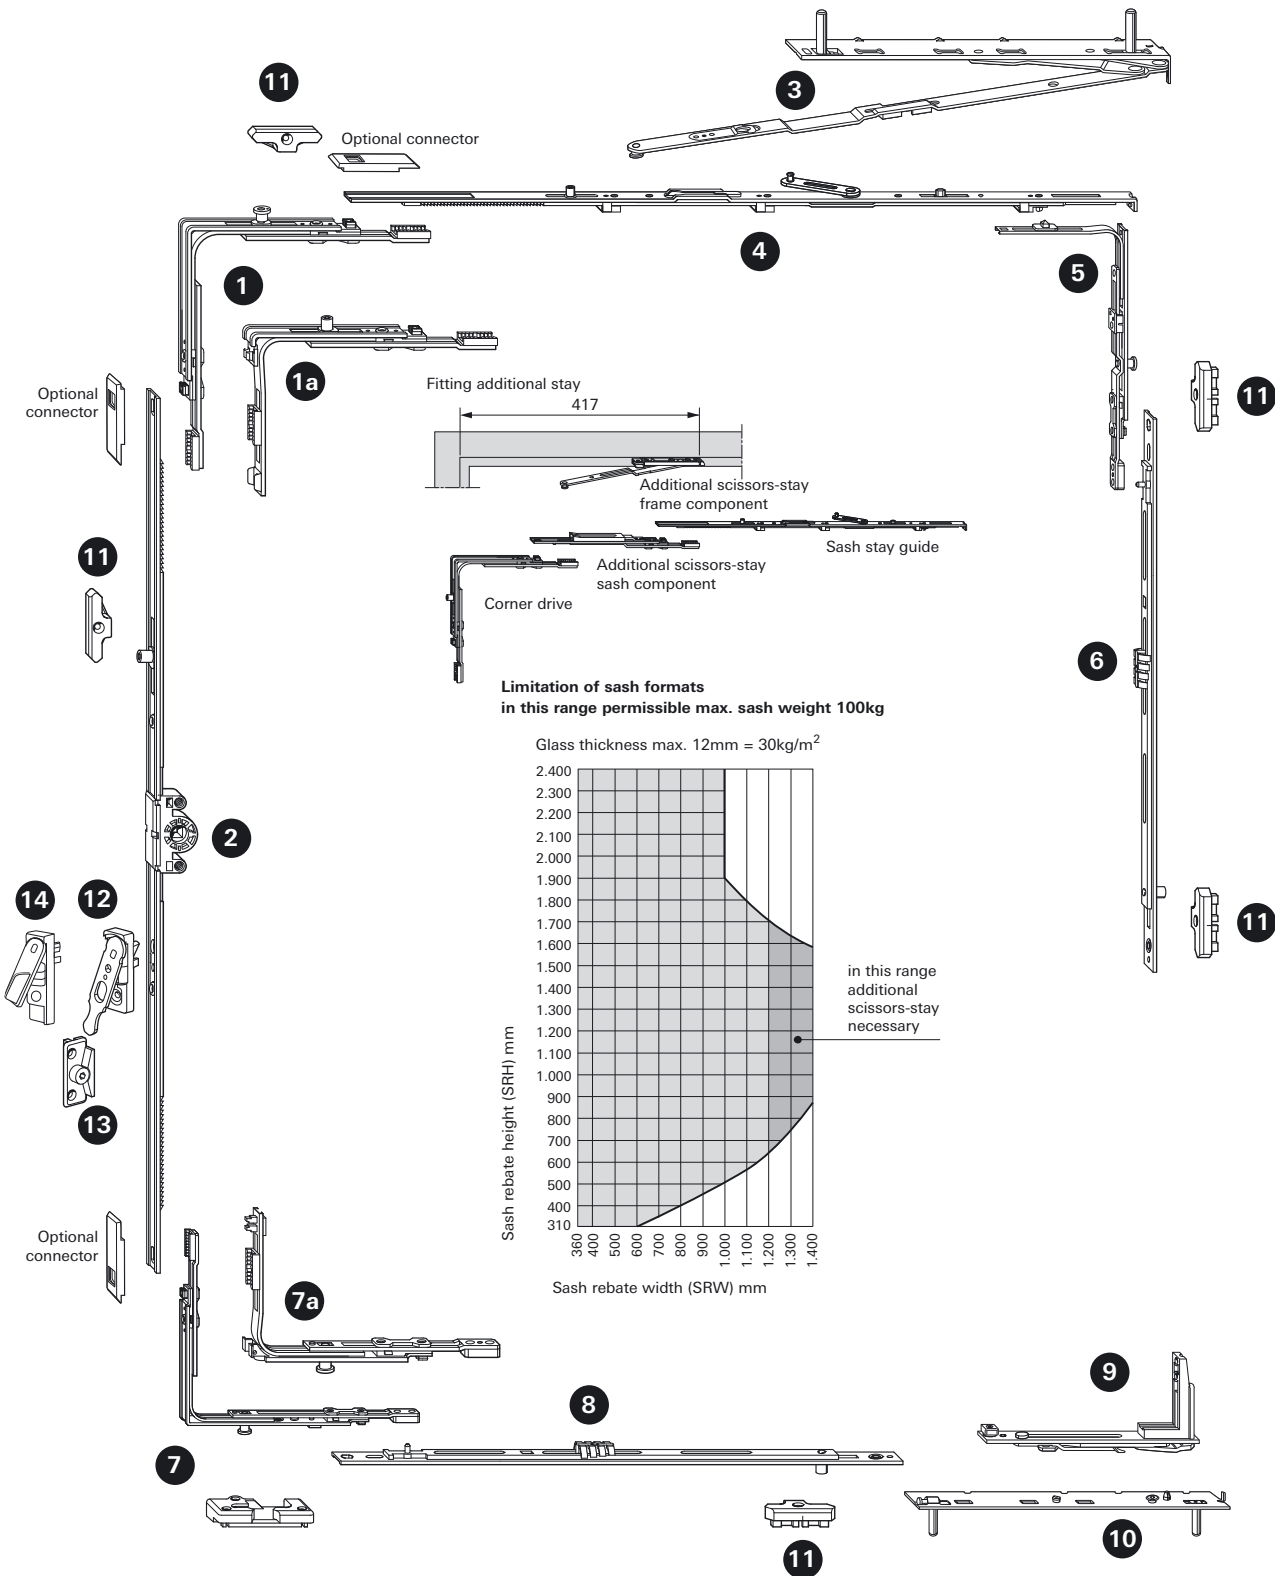

### Retro adjustment (only if necessary)

# Roto NT

## 'R' hinge

### Standard gearing

#### Application range

Sash rebate width, min. - max. 360 - 1400mm

Sash rebate height, min. - max. 310 - 2400mm

Sash weight, max. 100kg

Optional connector 350 401

# 'R' hinge Standard parts

## Sash preparation

### Routing gearbox

### Handle drilling & mounting

Fix the window-handle with  $\varnothing 5$  mm countersunk screws DIN965 (M5 X ...) in the espagnolette gear casing.

**RotoLine window handle** with lugs & 7mm spindle

### Cropping extensions

When cropping manually, the extension(s) should be cut so as to allow a gap of 33mm between the ends of the faceplates as shown.

This gap is then bridged using a dedicated connector piece.  
Part number **350401**

## 'K' and 'A' hinge

### Maintenance

#### Maintenance

Regular greasing and oiling\* (at least once a year) of all moving components in the sash and frame, will maintain the smooth operation of your Roto hardware and protect against premature wear and tear. Security strikers made of steel require continuous greasing in order to avoid unnecessary abrasion. In addition, the location of the screws is to be checked. Possible loose screws or torn off screw heads are to be replaced immediately by a specialised company.

Please use acid free and non-resinous grease and/or oil to lubricate parts. WD40 is NOT suitable.

# 'R' hinge Maintenance

## Maintenance

By means of regular **greasing and oiling\*** (at least once a year) all operation-relevant components in the sash and frame, you maintain the smooth operation of your Roto hardware and you protect against premature wear and tear. Security strikers made of steel require continuous greasing in

order to avoid unnecessary abrasion. In addition, the individual screws are to be checked. Possible loose screws or broken off screw-heads are to be tightened or replaced immediately by a specialised company.

\* Please use acid free and non-resinous grease and/or oil from a specialised dealer.

## Operating and safety instructions

### Operation

### Avoid mishandling

In order to preserve **functionality** of your window and to guarantee **security**, it is imperative the directives listed below are observed.

The window sash may not be burdened with additional weight.

Do not allow the sash to hit or press up against the window reveal.

Do not place any objects between the sash and frame.

Where small children or mentally handicapped persons have access to the window, the sash is to be safeguarded against turning, for example with a child-safety lock (inhibits turn mode, permits tilt-mode) or key-lockable handle.

Do not leave sashes open in the turn mode during strong winds.

**Caution!** A slamming sash can lead to injuries. While closing, do not grasp between the sash and frame.
